WHAT IS SMICHAE PEELING?

1. DEFINITION

- Gentle penetration through the epidermis into the deeper skin layers !

The key ingredient of SMICHAE PEELING, TCA, helps exfoliate the skin by acting on different skin layers. The oil phase in the formula helps protect the skin, enabling a gentler and more controlled peeling process.

TCA helps exfoliate dead skin cells on the skin surface and supports the stimulation of collagen and elastin production, helping to improve skin texture, enhance skin tone, and reduce the appearance of acne scars and fine lines.

MULTI-ACID PEELING

2. Product Overview & Differentiation

Lipophilic (oil-based) layer

The oil-soluble transparent oil helps prevent oxidation of the active ingredients and allows them to be delivered more effectively to the skin during treatment.

- **Skin Protection & Stabilization Benefits**
Protect TCA and other active ingredients from oxidation.
- **Skin Barrier Protection & Active Ingredient Delivery**
Help reduce transepidermal water loss (TEWL), minimizes irritation caused by acidic peeling agents, and supports the effective delivery of active ingredients.
- **Moisturizing & Hydrating Benefits**
Provide direct and indirect hydration to epidermal skin cells, helping improve cell cohesion and strengthen the skin barrier.

Hydrophilic (water-based) layer

The hydrophilic yellow water contains a variety of key ingredients and a regenerating peeling formula designed to support gentle, low-irritation exfoliation.

- **Cell Vitality Activation**
A multi-active solution combining AHA, amino acids, and vitamins that goes beyond basic brightening exfoliation, helping support cellular vitality in the deeper layers of the skin and maximize treatment results.
- **Collagen Production**
Hydroxyproline, a key building block of collagen, helps support keratinocyte activity and collagen synthesis. Effective on its own, it works synergistically with vitamin C to enhance collagen renewal and skin revitalization.

CHARACTERISTICS AND INDICATIONS

2.Product Overview & Differentiation

Product Name	Smichae peeling
Packaging Unit	1box / 5vials, 6ml / vial
Indications & Effects	Acne treatment and improvement of acne scars Pore tightening and improvement of skin texture Improvement of fine lines Skin brightening and improvement of melasma and hyperpigmentation Collagen regeneration and improvement of fine lines
Storage Method	Store at room temperature (2–25°C), away from direct sunlight. Caution: Do not freeze.
Key Ingredients	Trichloroacetic Acid (TCA), Mandelic Acid (AHA), Citric Acid (AHA), Lactic Acid (AHA), Aminobutyric Acid, Butylene Glycol, Squalane, Gluconic Acid, Vitamin B12, etc.

MAIN INGREDIENTS AND EFFECT

4.Main Ingredients

MAIN INGREDIENTS

- **Trichloroacetic Acid TCA**

Used for skin resurfacing and regeneration treatments, it helps improve fine lines, pigmentation, and skin texture, while promoting collagen regeneration and improving acne scars.

- **Citric acid AHA**

Provides exfoliation and hydration while helping to reduce hyperpigmentation.

- **Glycolic Acid AHA**

Gently exfoliate dead skin cells to smooth the skin and improve hyperpigmentation.

- **Mandelic Acid AHA**

Reduce acne

- **Lactic Acid AHA**

Antioxidant effect

- **Hydroxyproline**

Promote collagen production

- **Vitamin B12 & Vitamin C**

Regulate melanin production for a more even skin tone, while supporting collagen synthesis and delivering antioxidant benefits to enhance elasticity, brighten the complexion, and reduce hyperpigmentation.

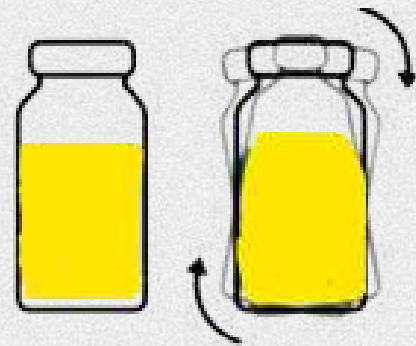

MAIN INGREDIENTS AND EFFECT

4.Effects

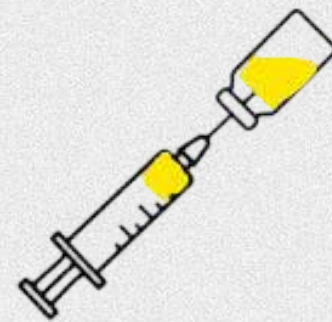

how to use ? 5.Directions for Use

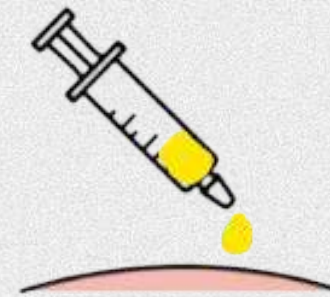

- **Before use**

1. Before use, shake well to ensure the product is thoroughly mixed.

2. Dispense a necessary amount and remove the needle.

3. Wear disposable gloves, apply small amounts of the product to the treatment area, and gently rub until fully absorbed.

4. After the recommended time, dampen gauze with water and carefully wipe the treated area.

how to use ? 5.Directions for Use

- Dosage & treatment frequency by area

FACE

1~1.5ml

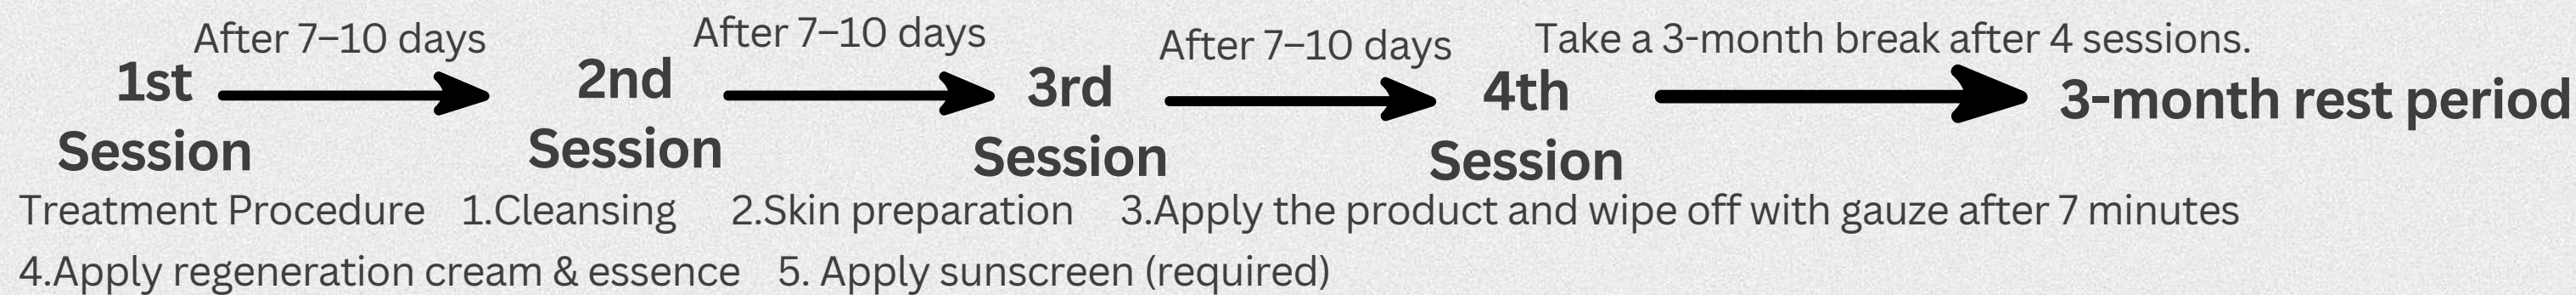

NECK

0.5~1ml

DÉCOLLETÉ

1~1.5ml

precautions

6.Post-treatment Precautions

Precautions

- Please strictly follow the recommended dosage and application time for each treatment area.
- Please check the client’s allergy history before use.
(Do not use on individuals with an aspirin allergy)
- After treatment, use a larger-than-usual amount of moisturizing products.
- During the peeling phase 2–3 days after use, do not forcibly remove the dead skin cells.
- Avoid excessive physical activity that increases skin temperature.

Storage instructions

- After removing the silver protective cap, store the product in a cool, dark place away from direct sunlight after use.
- If stored at room temperature, the product should be kept between 5–25°C. (Refrigeration is recommended.)
- After use, the remaining product may be stored for up to 40 days.

precautions

6. Post-treatment Precautions

For other inquiries

- Onset and duration of peeling

The timing of skin peeling varies from person to person (e.g., it may begin on the 3rd day after use or appear as late as the 7th day).

Once peeling occurs, the skin typically becomes smoother within approximately 5–7 days.

- What should be done when peeling occurs?

Apply plenty of moisturizer and avoid forcibly removing the peeling skin.

- Eye area application

Use around the eye area is permitted; however, extreme caution must be taken to avoid contact with the eyes.

- Face washing, sauna use, exercise, and outdoor activities

There is no restriction on daily activities. However, sauna use should be avoided for about one week, as it may cause premature peeling and reduce the treatment's effectiveness.

- Time to see results

Approximately one week after the peeling process is complete, the skin becomes clearer and more refined.

- Product application and removal timing

The duration may vary depending on the individual; however, a minimum of 7 minutes is recommended. Adjust the time slightly according to the situation.
