01.

What is BFA BABYFACE Ampoule?

A lipolysis injectable that destroys fat cells for permanent removal, rather than simply reducing fat volume.

Unlike many existing solutions that offer only temporary fat reduction, results may diminish as fat cells recover their original size over time.

These types of products make it difficult to achieve long-lasting results, as fat cells often return to their original state within 1–2 months, requiring repeated treatments.

BUT

BFA BABYFACE Ampoule works by destroying fat cells and promoting their elimination, with visible results appearing within 3–4 days. It is particularly effective in targeting localized fat deposits that are difficult to reduce through diet alone.

Product Introduction

• **bfa babyface ampoule /face**

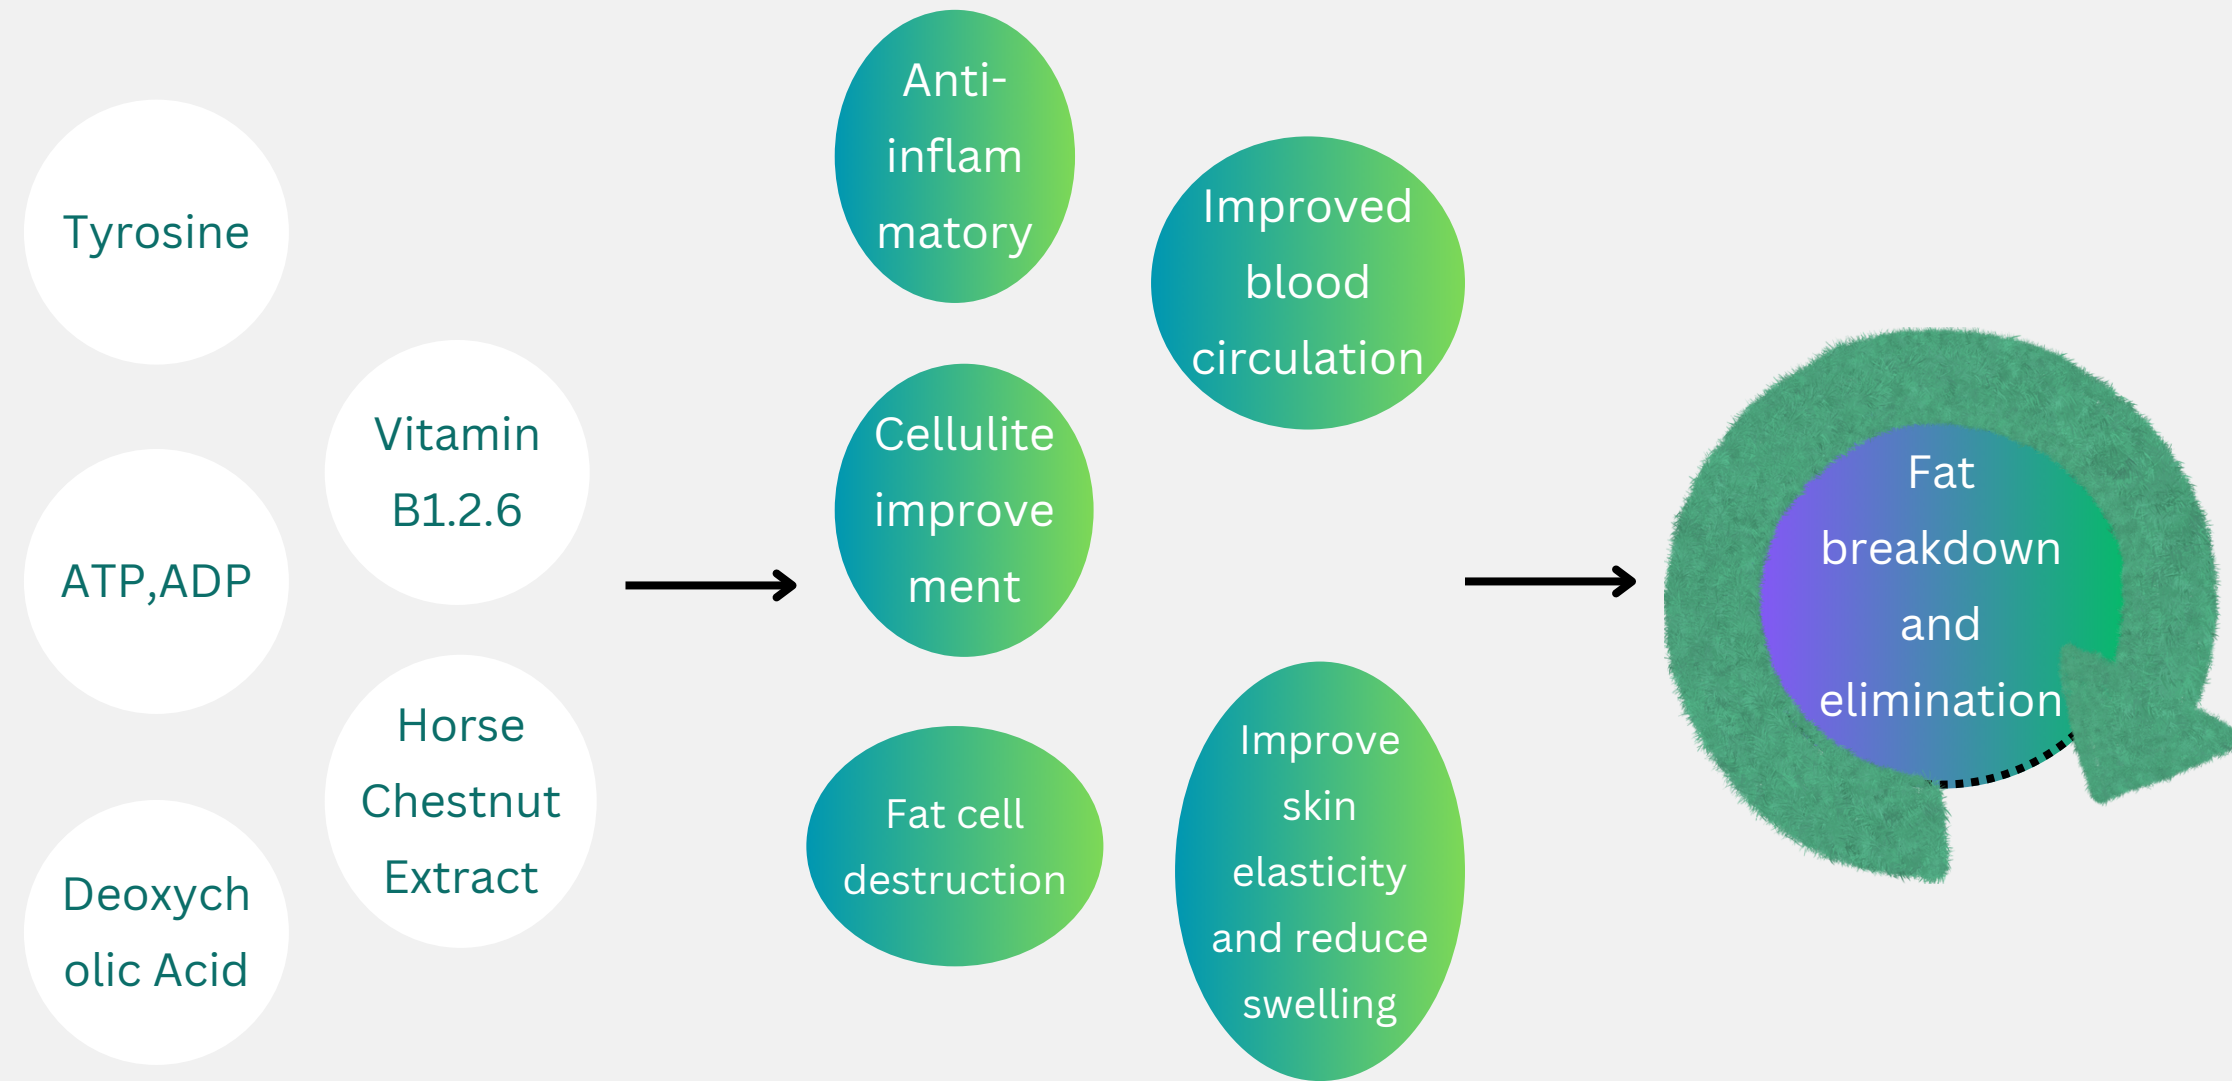

Category	Volume
Product Name	BFA BABY FACE AMPOULE/FACE
Packaging Unit	5MLx5EA
Storage Method	Store at room temperature (2-25°C), away from direct sunlight.
Main Ingredients	Tyrosine, Adenosine Triphosphate (ATP), Adenosine Diphosphate (ADP), Vitamins B1, B2 & B6, Magnesium Gluconate, Ascorbyl Phosphate, Horse Chestnut Seed Extract

• **bfa babyface ampoule /body**

Category	용량
Product Name	BFA BABY FACE AMPOULE/BODY
Packaging Unit	10MLx5EA
Storage Method	Store at room temperature (2-25°C), away from direct sunlight.
Main Ingredients	Tyrosine, Adenosine Triphosphate (ATP), Adenosine Diphosphate (ADP), Vitamins B1, B2 & B6, Magnesium Gluconate, Ascorbyl Phosphate, Horse Chestnut Seed Extract
Target Areas	Arms, abdomen, and other areas

03

MAIN INGREDIENTS AND EFFECT

04

HOW TO USE

Pre-Treatment Preparation

1

Treatment Area Marking & Disinfection

Before the procedure, the treatment area is marked and thoroughly disinfected.

2

Pre-Treatment Condition Management

A light massage is recommended prior to treatment to support lymphatic circulation in the treatment area. This is not mandatory.

3

Product Preparation

Before use, shake the product thoroughly to ensure the contents are evenly mixed. Proper shaking is essential for consistent results.

4

Injection Technique & Depth Control

The procedure is performed using a point-by-point injection technique. Injection depth is adjusted according to fat thickness, typically within a range of approximately 6–13 mm.

5

Confirmation of Application Area and Layer

The treatment targets the subcutaneous fat layer. Lightly pinch the area to confirm and apply at the appropriate depth.

04

HOW TO USE

Double Chin &
Facial Contour Areas

Case 1

Injection Depth 3mm-4mm
Point Spacing 1.5cm
Volume per Point 0.1ml-0.2ml
Recommended Dosage
Double chin 2ml /Face 2ml

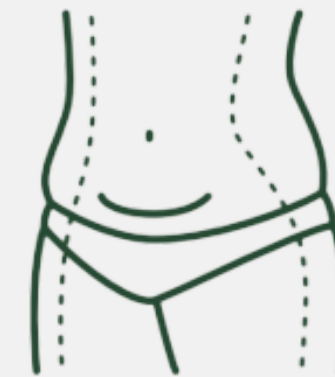

Arm Area

Case2

Injection Depth 5mm-12mm
Point Spacing 1-2cm
Volume per Point 0.2-0.3ml
Recommended Dosage 5ml

(For larger treatment areas, dilute with saline at a 1:1 ratio before use.)

Abdomen &
Thighs

Case 3

Injection Depth 6mm-15mm
Point Spacing 1-2cm
Volume per Point 0.2-0.3ml
Recommended Dosage Total Volume: 10 ml
For larger treatment areas, dilute with saline at a 1:1 ratio before use.

Back Area

Case 4

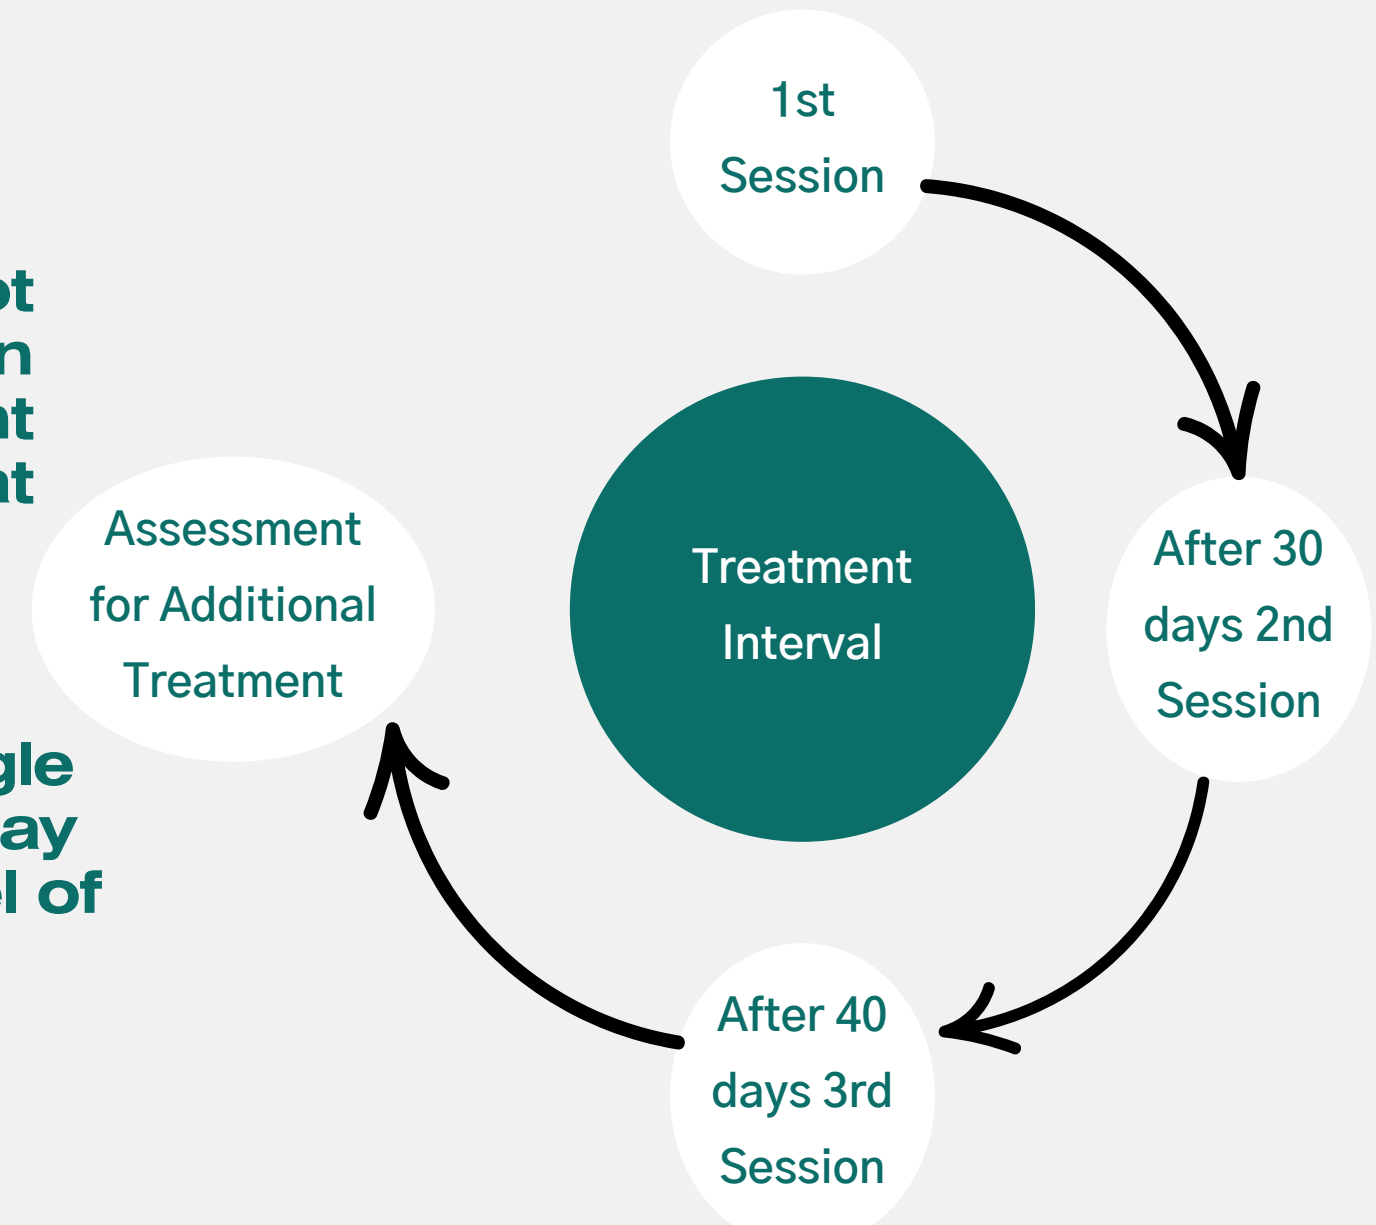

Injection Depth 5mm-12mm 정도
Point Spacing 1-2cm
Volume per Point 0.2-0.3ml
Recommended Dosage Total Volume: 10 ml (For larger treatment areas, dilute with saline at a 1:1 ratio before use)

05

Treatment Interval

The treatment interval and number of sessions are not the same for all patients. They may vary depending on individual skin condition, fat thickness, and treatment area. The final treatment plan should be determined at the discretion of the medical professional.

Satisfactory results may be achieved even after a single treatment session. Additional sessions (2nd or 3rd) may be performed based on the client's condition and level of satisfaction.

※ 시술 부위 및 상태에 따라 의료인의 판단 하에 조절합니다.

Pre- & Post-Treatment Precautions

1.Shake well before use

To achieve optimal results, please shake well before use, as the product may contain natural precipitate.

2.Dosage Instructions

Please adhere to the recommended dosage during use. Excessive use may increase the risk of side effects such as dizziness or hormonal imbalance. The standard dosage for the full face is 2 ml, with a maximum of up to 5 ml. For body treatments, do not exceed a total volume of 10 ml.

3.Injection Depth

Insufficient injection depth may result in dimpling; therefore, the product should be injected into the deep fat layer.

Precautions

Avoid excessive exercise and sauna use immediately after the procedure

For 24 hours after treatment, avoid heat-generating activities or sauna use. Heat may cause inflammation at the treated area.

Proper massage can help facilitate the elimination of fat cells.

It is recommended to massage the treated area with appropriate pressure, while avoiding excessive stimulation. Proper massage helps evenly distribute the solution within the subcutaneous fat layer, resulting in more consistent and effective results.

Avoid alcohol and smoking for one week

For faster recovery and improved blood circulation, it is recommended to avoid alcohol and smoking for one week.

Contraindications

In the following cases, the procedure **should be avoided**, or performed **only after adequate medical assessment**.

- In cases of pregnancy or breastfeeding
- In cases of liver or biliary tract disorders
- Patients with type 1 or type 2 diabetes
- Patients with chronic kidney disease
- Patients with allergic tendencies or a history of hypersensitivity
- Patients with collagen vascular disease

In addition, the procedure is not recommended in the following cases.

- If an allergic reaction to any of the product ingredients is confirmed or suspected
- If there are inflammatory or pustular lesions at the intended treatment site
- If a chronic condition is in an acute exacerbation phase

THANK YOU
