South Korean filler from Sowonbio, , SMICHAE is specially designed for contouring and rejuvenation of the periorbital area. Recommended for dark circles and facial wrinkles in the eye area, severe nasolacrima grooves, and eyelid hernias. Including, it can be used to rejuvenate the hands. SMICHAE is a high-quality filler of the highest level of purification, non-animal acid does not cause allergic reactions, suitable for patients with sensitive skin. A very light gel that does not cause swelling and does not exert pressure on tissues. Thanks to the ingredients in the composition, the drug is absolutely safe and completely biocompatible with the human body. The composition includes additional components that improve the skin, saturate it with essential substances; the presence of an anesthetic in the composition of the product makes the procedure more comfortable. This product has earned the title of top and confidently took the leading position. The manufacturer's product is compared with the products of the brands Juvederm, Radiesse, Teosyal.

WHY SHOULD YOU CHOOSE

SMICHAE EYE FILLER

Thanks to its exclusive formula, the filler has an ideal level of HA concentration, optimal distribution ability for rehydration and re-strengthening of the dermis.

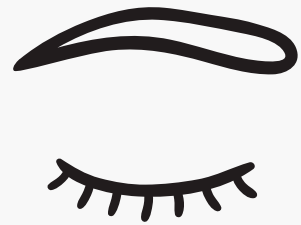

When used on the back of the hands, it adds volume and provides a soft touch at the same time.

Product from other manufacturers: when used around the eyes, the filler may be distributed unevenly and may not stick out naturally.

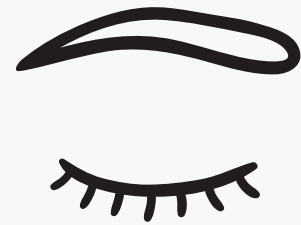

Other manufacturers' product: adds volume to the back of the hands, but the area where the filler was injected may feel hard.

INDICATIONS SMICHAE EYE

Hollows under the eyes make you look older

Due to the depressions under the eyes, the bruises are even darker

Those who want to completely rejuvenate the area around the eyes

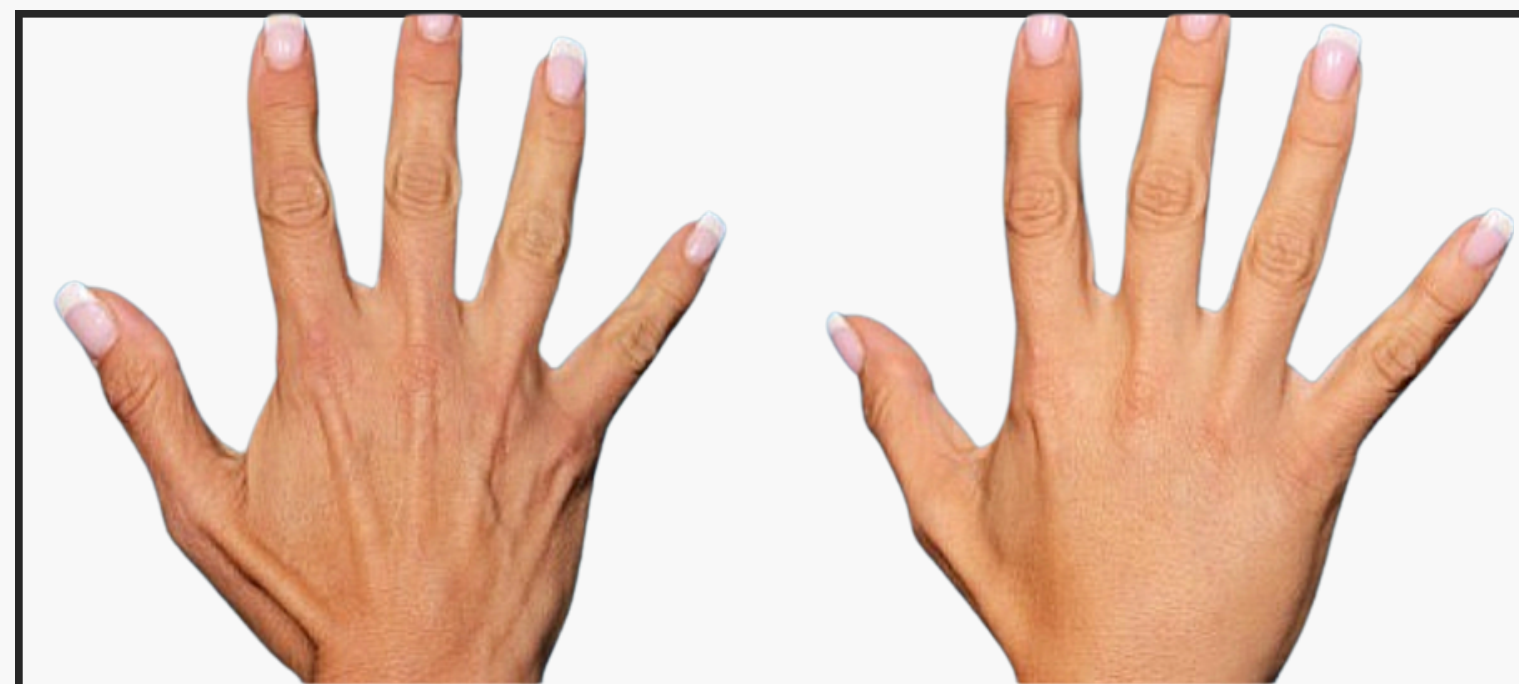

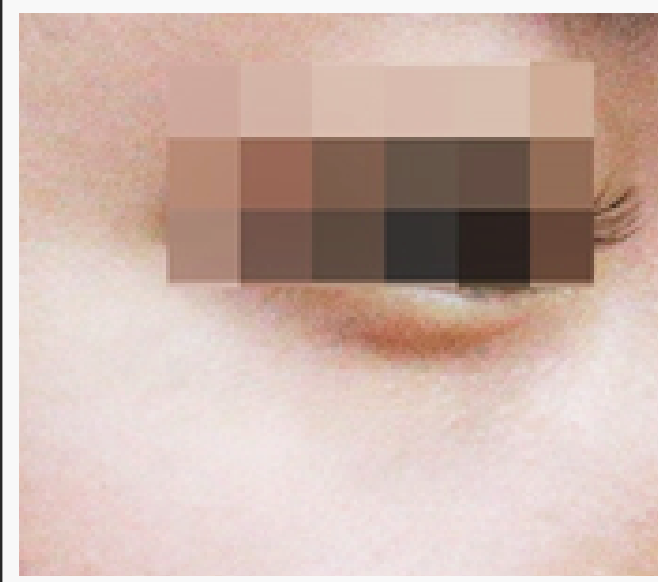

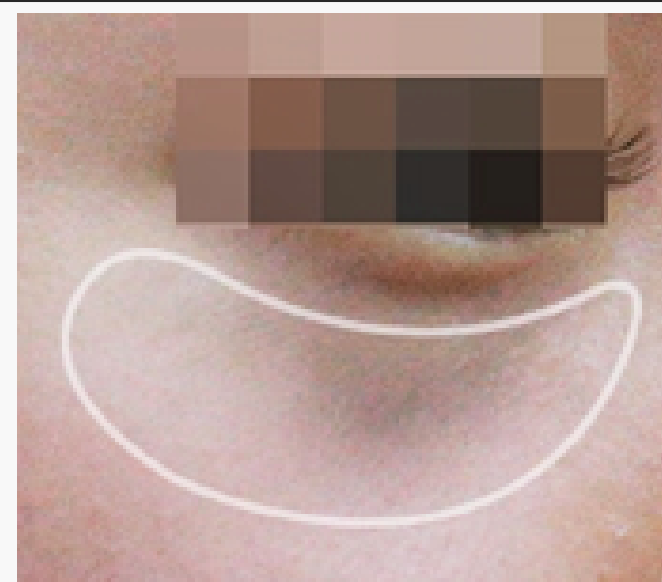

Who is very concerned about drooping lower eyelid

Non-surgical and quick problem solution

RESULTS BEFORE AND AFTER

CONTRAINDICATIONS

Despite the delicacy of correction in the area around the eyes, the drug shows a low level of side effects. According to all customer reviews, the rate is 0 cases. This is the best indicator in the beauty and cosmetology industry. However, the drug has a list of contraindications identical to the list for most hyaluronic acid-based fillers:

- Allergic reaction to the components of the drug,
- Oncology,
- Autoimmune diseases,
- Epilepsy,
- Inflammation in the periorbital area,
- Low blood clotting and taking anticoagulants,
- Tendency to form scars,
- Pregnancy and lactation period,
- Age under 18 years old.

The following side effects may occur after the procedure:

- Hematoma formation
- Edema formation,
- Increased skin tension,
- Pain on the skin

These unpleasant symptoms usually pass quickly. However, if the side effects increase or an inflammatory process begins, the patient should immediately contact a specialist to apply the appropriate set of measures to eliminate the problem.

PROTOCOL

 The drug should be administered exclusively with a cannula. A cannula is a special thin device with a blunt end, which allows to significantly reduce the risk of damage to blood vessels.

 Если работают не имеющие достаточной квалификации, опыта и знаний специалисты, а также специалисты, работающие обычной иглой в этой зоне, риск прокола сосудов и других повреждений максимальный.

 If specialists who do not have sufficient qualifications, experience and knowledge work, as well as specialists who work with a regular needle in this area, the risk of puncturing blood vessels and other injuries is maximum.
